shanay.ambani4@gmail.com | (765) 767 - 3306 | [linkedin.com/in/shanayambani](https://www.linkedin.com/in/shanayambani)

Education

Purdue University | *Bachelor of Science in Mechatronics Engineering Technology* 08/2026

- Coursework: Mechanics & Materials, Manufacturing Processes, Automation & Control, CAD & Design, LabVIEW, Instrumentation & Data Acquisition, Digital Systems, Physical Foundations, Leadership & Professional Development.

Skills

- **Technical:** SolidWorks, CAD (AutoCAD, Inventor), NX PDM/PLM, GD&T, Engineering Drawings, Mechanical Design, Design for Manufacturability (DFM), Rapid Prototyping, Prototype Fabrication, Structural Analysis (FEA), Tolerance Analysis, 3D Scanning (MeshMixer, QuickSurface), LabVIEW, Microsoft Excel, Microsoft PowerPoint.

Experience

D&O Motorsports | *Design Engineering Intern* 05/2025 - 08/2025

- Redesigned the Honda City bumper in SolidWorks, reducing aerodynamic drag by 4%, validated through CFD simulation.
- Developed manufacturable CAD models, surface geometry, and BOMs from 3D scan data for product design.
- Fabricated aerodynamic components within 0.5 mm tolerance, performing fit checks through iterative prototyping.
- Refined designs through structural and performance testing to improve manufacturability and product performance.

L.I.M.E (Launchpad for Indian Motorsport Engineers) | *Fellow and Intern* 05/2024 - 08/2024

- Completed an 80-hour motorsport engineering program in CAD modeling, prototyping, and mechanical design.
- Selected as one of 70 fellows based on strong mechanical design and problem-solving ability.
- Improved CAD model accuracy by 10% using 3D scanning and surface refinement for prototype development.
- Modified component geometry to support design integration and manufacturability requirements.

Projects

Senior Design Capstone (Purdue University) | *Mechanical Design Lead* 08/2025 - 05/2026

- Designed a mounting system for an RFID sensor platform, achieving 21 ft detection from a 7 ft height.
- Developed CAD assemblies, engineering drawings, and bills of material to support fabrication and system integration.
- Validated design integrity under 8.7 lb-ft torque and 30 mph wind loading via structural simulation.
- Improved system reliability by 18% through root cause troubleshooting and iterative prototyping.

Skoda Superb Rear Spoiler Concept | *Shadow Intern* 12/2024 - 01/2025

- Assisted in designing a rear diffuser and spoiler system, balancing aerodynamic performance with manufacturability.
- Modeled components and evaluated airflow behavior using CAD and CFD simulation tools.
- Applied design insights to support development of a front aero concept for prototype evaluation and testing.

Formula SAE Selection Project (Chain Drive System – Purdue University) 09/2024 - 10/2024

- Designed a chain drive system, including sprocket geometry, tensioning, and load transfer, using CAD.
- Evaluated alignment and clearance requirements to ensure manufacturability and reliable mechanical operation.
- Produced engineering drawings and design documentation to support fabrication and validation testing.

Academic Papers

Water Hardness Study (Chemistry – International Baccalaureate – Individual Assessment)

- Identified an estimated 7% reduction in water hardness by analysing titration results across 5 temperatures.

Engine Oil Viscosity Study (Physics – International Baccalaureate – Individual Assessment)

- Measured engine oil viscosity under varying temperatures and observed an estimated 20% decrease as the temperature increased.

Volunteering

Step Up NGO | *Co-Founder* 05/2020 - Present

- Co-founded a nonprofit supporting holistic development for underprivileged children.
- Secured over \$11000 through relief drives and crowdfunding, supporting more than 200 students.
- Expanded outreach to over 200 children through sports and environmental initiatives.

Interests

Swimming, Cricket, Photography (featured on Animal Planet India), Top 10% Wharton Global Youth Investment Competition.
